ABOUT THIS GUIDE

A decision-making simulation about stakeholder perspectives, evidence and the consequences of tourism development.

Your role

You are part of the Nusa Luma Island Council. Across six linked decisions, you will consider how tourism should develop on the island. Each choice can affect residents, the tourism industry, local businesses, workers, the environment and infrastructure in different ways. There is rarely a choice that satisfies every stakeholder.

What you will practise

- Recognising different stakeholder interests and priorities.
- Weighing evidence, uncertainty and competing claims.
- Explaining trade-offs and defending your decisions.
- Noticing immediate, delayed and cumulative consequences.

GETTING STARTED

Choose Senior Secondary or Higher Education. Both follow the same Nusa Luma decisions, but the questions and evidence expectations differ.

Before the first decision

- Choose your learning pathway and enter a first name, nickname or group name.
- Read the pre-simulation briefing, examine the stakeholder groups and make your initial prediction.
- If working in a group, agree on how you will discuss and record each choice.
- Use the stakeholder analysis to notice where interests may align, where they may conflict, and which claims you would want to verify.

THE DECISION CYCLE

Each of the six decisions follows a similar process. Use all available information before selecting an option.

1 Explore the map

Select the numbered map locations to explore island communities, proposed developments, environmental areas and infrastructure.

2 Read the Stakeholder Pulse

Review every available perspective for the decision rather than stopping at the first familiar or persuasive opinion.

3 Open the Decision Briefing

Identify the key problem, supporting evidence, uncertainty and the critical question before you choose.

4 Compare options and decide

Ask what each option gains, what it risks, whose priorities it supports and what may become difficult to reverse. Discuss your reasoning before submitting.

The six Nusa Luma decisions

1. Paradise Point Resort
2. The Island Is Running Dry
3. Who Gets to Live on the Island?
4. The Reef Is Losing Colour
5. The Village Becomes an Attraction
6. What Should Nusa Luma Become?

Remember

The simulation provides evidence and consequences. You provide the judgement. There is no hidden “perfect” pathway.

AFTER EACH DECISION

5 Look for consequences

Some effects are immediate; others are delayed. Watch the stakeholder impacts and read new reactions to see how the wider Nusa Luma system changes.

6 Reflect and move forward

Do not judge a decision only by whether one group benefited. Consider fairness, evidence, trade-offs, uncertainty and longer-term impacts.

Useful questions

- What evidence influenced us the most?
- Whose perspective did we initially overlook?
- What assumption are we making?
- What would we change if new evidence emerged?

YOUR FINAL ANALYSIS

SENIOR SECONDARY - FINAL ANALYSIS

The simulation provides evidence. You provide the judgement.

Use the results beside you to explain how your thinking developed. There is no model answer.

1. Which decision was the hardest?
What made it difficult, and what did you decide to prioritise?

2. Did anything change your thinking?
Consider stakeholder perspectives, delayed consequences or the unexpected event.

3. Do you consider your final Nusa Luma outcome sustainable?
Use at least two pieces of evidence from your results to explain your judgement.

4. What would you still want to know?
Which stakeholder perspective, fact or piece of evidence would help you make a more informed real world decision?

YOUR PATHWAY Decision record

1. Paradise Point Resort Approve the full 420-room resort

2. The Island is Running Dry Protect resort supply and truck water to villages

3. Who Gets to Live on the Island? Leave the short-term rental market unrestricted

4. The Reef is Losing Colour Keep access open and run an awareness campaign

5. The Village Becomes an Attraction Keep access unrestricted

6. What Should Nusa Luma Become? GROW — more beds, flights and attractions

STAKEHOLDER PATTERN

Most supported:
Tourism Industry

Most pressured:
Environment

This describes distribution. It is not a sustainability score.

UNEXPECTED EVENT

Record Drought
Previous policy protected tourism demand without reducing consumption or adding new supply. The drought exposes that vulnerability.

The final analysis brings together your reasoning and the decisions made during the Nusa Luma Island project.

Use your report to explain - not just describe

- Identify a decision you would defend and the evidence behind it.
- Discuss one compromise or trade-off that was difficult.
- Find an unexpected or delayed consequence and explain why it matters.
- Name a stakeholder perspective that changed your thinking.
- Explain what information or evidence you would investigate further.

Final challenge

Would you make the same decisions again? What would you keep, change or investigate further - and why?
